
# Cross-border Structuring: Practical uses of offshore holding vehicles

### Introduction

As businesses grow internationally, managing ownership, investments, and operations across multiple jurisdictions can become more complex. Offshore holding vehicles, such as Cayman Islands and British Virgin Islands companies are commonly used to help simplify international corporate structures and support cross-border business activities.

### Common Uses

- **Centralising Ownership**
  Holding companies can be used to consolidate ownership of subsidiaries, investments, or business interests under one structure, making group management more efficient.
- **Holding International Investments**
  Offshore vehicles are often used to hold shares, investment assets, or ownership interests across different jurisdictions.
- **International Investment Structuring**
  Cayman and BVI structures are widely recognised by international investors making them commonly used in investment transactions.
- **Simplifying Group Structures**
  A holding company can help create a clearer group structure, improve oversight, and make decision-making across multiple entities easier..

## How We Can Help

Our team assists businesses, investors and international groups with the establishment and ongoing administration of offshore holding structures. We provide practical support with company formation, registered office services, compliance, and corporate governance.

## Contact Us

If you are considering a Cayman Islands or BVI holding structure for your international business, please contact us to discuss how we can support your cross-border structuring needs.
